

Bill Glover

Documentation & Content Transformation Consultant — AI-Assisted Content Systems

Amarillo, TX · Remote / Work-at-Home · Available for full-time and consulting engagements

bill@billglover.com · 806-433-0866 · github.com/scriptgadget · billglover.com

SUMMARY

Engineering leader who pairs three decades of technical documentation and content-architecture work with hands-on AI systems building. O'Reilly author (RFID Essentials) and former technical writer, with direct experience authoring the standard operating procedures, system documentation, and technical standards that large technical organizations run on. As Chief Architect at Sabre, defined technical standards and career-development frameworks and drove adoption across a 150-product portfolio through influence rather than mandate — the same governance and change-management work this engagement calls for. Currently building production-grade AI agents for clients, with a deliberate focus on reliability, tested behavior, and enforced read-only access — the same discipline required to bring AI safely into a documentation lifecycle without sacrificing technical accuracy.

RELEVANT EXPERTISE

- Technical documentation & content lifecycle: authored SOPs, system documentation, and a published O'Reilly technical reference; owned documentation as part of architecture and delivery responsibility across every role below.
- AI-assisted content workflows: currently design and build production AI agents for clients — emphasis on tested reliability, safety boundaries, and enforced read-only access, directly transferable to AI-assisted drafting, summarization, and content-reuse pilots.
- Governance & standards: defined technical standards, role definitions, and career-development frameworks across a 150-product architecture portfolio at Sabre; drove adoption through demonstrated value, not mandate.
- Content operations at scale: led modernization and compliance-driven documentation and process work for a global SaaS platform (GlobalGiving) through a multi-year engineering leadership and consulting arc.
- Stakeholder facilitation & change management: trained mediator (Texas Association of Mediators board member); comfortable driving adoption across Product, Engineering, Support, and Technical Writing stakeholders with competing priorities.
- Platforms & tooling: Confluence for knowledge management at GlobalGiving; wiki-based documentation systems at Sabre, AJA Video Systems, and Bright Canopy; WordPress, Jekyll, and custom Python content-migration tooling (structured content conversion, metadata-driven galleries, taxonomy-based reuse).

EXPERIENCE

Independent — AI Systems & Technical Consulting — 2025–Present

- Design and build production-grade AI agents for clients, emphasizing tested reliability, explicit safety boundaries, and enforced read-only access over demo-quality automation.
- Recent engagement: led a full content-migration and information-architecture project — converting a 41-page, 16,000-image legacy site into a structured, taxonomy-driven CMS, including custom Python tooling for content transformation and a metadata-driven gallery/reuse system.

GlobalGiving — Director of Engineering / Consulting Engineer — 2018–2025

- Directed engineering for a major global giving platform; owned architecture direction, delivery, and the documentation and process standards the team operated under.
- Returned post-tenure as Consulting Engineer to drive modernization and compliance work, including reinforcing documentation and engineering best practices across the platform.

Sabre Holdings — Chief Architect, Airline Solutions — 2007–2008

- Defined technical standards, role definitions, and career-development frameworks for an organization overseeing roughly 150 products.
- Directly managed 5 architects and held mentorship and oversight for 12+ product-team architects; drove standards adoption through influence and demonstrated value rather than mandate.

Sun Microsystems — Senior Java Architect / Enterprise RFID Architect — 2001–2006

- Served as methodology and architecture coach across full project lifecycles, authoring and standardizing delivery methodology documentation used across multiple enterprise clients.
- Recognized subject-matter expert in Sun's RFID technology incubator; research and technical authorship in this role fed directly into RFID Essentials.

General Dynamics Information Technology (formerly Anteon) — Technical Writer, Programmer — 1997

- Authored the Standard Operating Procedure for the SCADA system governing Imperial Dam and the Lower Colorado River water-control systems for the Bureau of Reclamation — detailed technical documentation for a mission-critical control system, including illustrations and operational procedures.

PUBLICATIONS

- RFID Essentials (O'Reilly Media) — co-authored technical reference on RFID theory and practice; full-length published technical documentation, from research through editorial production.

VOLUNTEER & AFFILIATIONS

- Texas Association of Mediators — Newsletter Editor, Board of Directors (2025–present)
- NAACP, Amarillo Branch — Executive Committee, Communications Committee Chair (2018–2024)
