

Bill Glover

Engineering Leader — Director of Engineering / Engineering Manager

Systems, platform, and Linux/Unix infrastructure

Amarillo, TX · Remote · Open to full-time engineering leadership roles

bill@billglover.com · 806-433-0866 · github.com/scriptgadget · billglover.com

SUMMARY

Engineering leader with deep Unix and Linux systems roots, from Solaris enterprise platforms to embedded Linux distributions hand-built from source. Three years leading engineering for one of the largest global giving platforms on AWS, running on Linux. Earlier, as Chief Architect at Sabre, managed a team of architects across a portfolio driving roughly 150 products. I lead through influence and demonstrated value, develop engineers into their next role, and carry teams through hard technical problems without burning them out. Thirty years hands-on, close enough to the kernel and the cloud to make credible calls. I am trained in conflict resolution and mediation, so I'm comfortable in uncomfortable conversations and understand how to leave space for healthy disagreement. My job is to make the team effective, not to be the smartest person in the room.

LEADERSHIP

- Building, growing, and retaining engineering teams
- Mentorship, role definition, and career development
- Technical strategy, architecture, and roadmap ownership
- Linux/Unix platform and infrastructure strategy
- Cross-functional delivery and stakeholder management
- Remote-first team leadership
- Facilitative mediation and conflict resolution

SYSTEMS & INFRASTRUCTURE

- **Embedded Linux:** Built and maintained embedded Linux distributions from source using Linux From Scratch and BusyBox, including toolchain and cross-compilation work and root-file-system assembly, for Linux-based video capture and processing hardware.
- **Solaris / SunOS:** Years architecting and delivering enterprise Java and J2EE systems on Sun's Solaris platform, plus thought leadership in Sun's RFID technology incubator.
- **QNX (real-time Unix):** Mission-critical embedded control software on QNX for industrial feedmill systems.
- **Linux in production:** Linux-based platform and services at scale on AWS, including reliability and modernization work.
- **Tooling:** Bash, C/C++, and the standard Unix toolchain across all of the above.

EXPERIENCE

GlobalGiving — Engineering Leadership (Linux/AWS platform)

2018–2025

Grew from senior engineer to Director, then returned post-tenure as a trusted consultant.

- **Director of Engineering (2021–2024):** Led the engineering team for the Linux-based AWS platform. Owned delivery, architecture direction, and team health, and led the team through scaling, reliability, and technical-debt work while protecting against burnout.
- **Consulting Engineer (2024–2025):** Invited back to drive modernization and compliance work and reinforce engineering best practices.
- **Senior Software Engineer (2018–2021):** Hands-on development and architecture across the AWS platform before stepping into leadership.

AJA Video Systems — Senior Staff Engineer

2008–2015

Embedded systems work on Linux-based video capture and processing hardware.

- Built and maintained embedded Linux distributions from source (Linux From Scratch, BusyBox), including cross-compilation toolchains and root-filesystem assembly.
- Embedded C++ application development on the devices, performance-critical and close to the hardware.

Sabre Holdings — Chief Architect, Airline Solutions

2007–2008

- Directly managed 5 architects and held mentorship and oversight for 12+ product-team architects who drove roughly 150 products.
- Defined the technical roles and career-development plans for the organization.
- Drove technology adoption and standards through influence and demonstrated value rather than mandate, without impeding tight delivery deadlines.

Sun Microsystems — Senior Java Architect / Enterprise RFID Architect

2001–2006

- Lead architect delivering enterprise Java and J2EE systems on the Solaris platform through full system lifecycles, including a complete re-architecture of one of the highest-value travel sites in the world.
- Methodology and architecture coach; mentored client teams on design, patterns, and delivery.
- Contributed to the field of RFID through Sun's RFID technology incubator as a recognized subject-matter expert.

ITA Software (Google) — Customer Relationship Manager

2006

Primary point of contact for the company's largest customer. Defined goals, tracked execution and delivery, and negotiated internal and external priorities across a matrix organization.

Earlier

- **Micro Beef Technologies:** Mission-critical embedded C control systems on QNX for cattle feedyards, deployed at 65 sites. (AgTech.)
- **Bright Canopy (Founder):** Founded a startup delivering rich virtual worlds in the browser; acquired into the Frame (now Nutanix) product portfolio.
- **Bureau of Reclamation (via Anteon):** SCADA control and telemetry systems for Imperial Dam and the Lower Colorado River.

STILL HANDS-ON

Cloud cost-audit CLI (in development): concurrent multi-region AWS scanning under a strictly read-only IAM policy. I keep building so I stay current with the stack my teams work in.

TECHNICAL PROFICIENCY

Systems: Linux (including embedded: Linux From Scratch, BusyBox, cross-compilation), Solaris/SunOS, QNX, Bash, the Unix toolchain

Languages: Java, C, C++, Python, Bash, JavaScript, TypeScript/React

Cloud & infra: AWS (EC2, RDS, DynamoDB, Lambda, API Gateway, SQS, CloudFront, S3, Step Functions, CloudFormation), Docker, Redis

PUBLICATIONS

RFID Essentials (O'Reilly Media)

VOLUNTEER

NAACP (2018–2024) — Amarillo Branch Executive Committee, Communications Committee Chair

Texas Association of Mediators (2026–present) — Board of Directors and Editor of *The Texas Mediator* Newsletter
